

DISCLAIMER

The performance characteristics of the products described in this catalog are only examples of measurements and are not guaranteed. If using our products in operating conditions outside those given in this catalog, determining suitability is the responsibility of the user, notwithstanding examples of test results or data obtained under similar operating conditions provided by AGC ENGINEERING. Any material provided by AGC ENGINEERING is for reference only, and application is subject to the user's own judgment and responsibility.

Warranty and Limited Warranty Terms and Conditions

AGC ENGINEERING Co., Ltd. warrants all of its products to be free from defects in materials and workmanship for a period of one year after the date of delivery, provided the use, installation, application, maintenance, and storage of the products are in accordance with the specifications and description in the instruction manuals and catalogs provided by AGC ENGINEERING.

Under this warranty, the obligation of AGC ENGINEERING to provide compensation for any defect is limited only to repairing or replacing the defective product at the discretion of AGC ENGINEERING, and only if the defective product is returned unaltered to AGC ENGINEERING and the defect can be verified by AGC ENGINEERING.

Any claim shall be presented to and processed by AGC ENGINEERING's established claim procedure. AGC ENGINEERING reserves the right to discontinue manufacturing any products, or to change materials, design, and specifications without prior notice. Except for the above warranty, AGC ENGINEERING makes no warranties written, expressed or implied.

Warning to System Designers and End Users

To prevent danger or injury resulting from improper use of our products, system designers and end users must read the following precautions carefully before designing, installing, and using the system into which our products are being incorporated. All of our products must be designed, installed, and used to comply with the specifications and the description in the instruction manuals and catalogs. System designers and end users must read the warnings described in the instruction manual shipped with our product carefully. System designers are obliged to provide information on our products and warnings to end users, to help them properly understand how to use our products safely.

Under certain circumstances, normal operation of a device is prevented by improper use, malfunction, or the device's life span. Users of our products should take this into consideration in application, intended use, system design, installation, and operation, and should provide an adequate safeguard to protect life and property even in the event of a malfunction or deterioration of product fluid.

In the instruction manual of the system, the system designer should provide all end users with a warning that malfunction is still possible even if the system is carefully designed.

Under no circumstances should our products be used for life support devices, vehicle control devices, aircraft, or other devices that have the potential to pose a serious hazard to life and property.

Before attempting to connect, disconnect, replace, or repair our product, all system lines supplying fluid or energy to our products must be shut off or removed. Repair is subject to the procedures previously recommended by AGC ENGINEERING.

Our products are designed for industrial systems. For nonindustrial applications and other applications beyond AGC ENGINEERING specifications with respect to temperature, pressure, flow rate, and fluid, please consult your distributor.

The specifications published in this catalog are subject to change without notification and the data published in this catalog are for reference purposes only and do not represent a guarantee of product performance. The formal specification sheets will be submitted on request.

- 本カタログ記載の仕様は改良のため予告なく変更される場合がありますので、あらかじめご了承ください。
又、本カタログ記載データはあくまでも参考値であり製品を保証するものではありません。
ご要望により正規仕様書を提出致します。
The specifications published in this catalog are subject to change without notification and the data published in this catalog are for reference purposes only and not guarantee of product performance.
The formal specification sheets will be submitted upon request.

 安全に関するご注意 Safety Warning
ご使用にあたっては、本製品に付属する取扱説明書の注意事項を必ず守ってください。
Please be sure to read and observe the cautions printed in the instruction brochures supplied with these products when you use them.

MEMBRANE TYPE DRYER 膜式ドライヤー

SUNSEPTM
サンセップ[®]

SUNSEP™

膜式ドライヤー MEMBRANE TYPE DRYER

サンセップ®はAGC旭硝子が開発したフッ素系高分子樹脂 "フレミオン®" を用いた製品です。
 sunsep™ utilizes Flemion™, a fluorine-containing polymer developed by Asahi Glass Company (AGC).

水と空気 地球になくてはならない大切なものです。しかし、水は扱い次第で災いのもとにもなります。サンセップ®はさまざまな産業分野において、水分トラブルでお困りのお客様へ優れた解決策を提供し、浪費コストの低減をお約束します。

Both water and air are precious resources, but humidity can occasionally cause problems. sunsep™ offers an outstanding solution for this problem in a range of industrial applications and helps to reduce the costs of waste.

"フレミオン®"はAGC 旭硝子の登録商標です。
 Flemion™ is a registered trademark of AGC.

FEATURES

sunsep™

中空糸膜・拡大写真
Hollow Fiber Membranes
SEM Image

THE sunsep™ PRINCIPLES

“フレミオン®”は、水分子との親和力を有するフッ素系イオン交換膜です。中空糸膜の内側と外側に水分濃度差が生じると、その濃度差を均等にしようとする力が発生します。水分はこの発生した力をドライビングフォースとして、低い水分濃度の方へ膜を透過し移動します。

Flemion™ is a fluorine-containing, ion-exchange membrane which has a high affinity for water molecules. When differences in moisture concentration between the inside and outside of a hollow fiber membrane arise, sunsep™ will act to make the concentrations uniform, continuously transferring moisture through the membrane in the direction of the lower moisture concentration.

sunsep™ Module Example (SWB-05-100)

BASIC FLOW

SWB & SWF Series

SWC Series

● **パージガスとは**：中空糸膜を透過した水蒸気を排出するために、生成した乾燥ガスの一部を中空糸外側に流します。このガスをパージガスといいます。

***Purging Gas**: Part of the dry gas produced returns to the outside of the hollow fiber membranes as purging gas which exhausts the water vapor.

● **パージ率とは**：供給ガス流量に対するパージガス流量の割合をパージ率といいます

$$\text{パージ率 (\%)} = \frac{\text{パージガス流量}}{\text{供給ガス流量}} \times 100$$

サンセップ®の標準パージ流量比率は、供給ガス流量の10～20%程度です。すなわち除湿されたガスの生成比率は供給ガス流量の80～90%となります。

***Purging Gas**: The purging gas flow rate is defined as follows:

Flow Ratio

$$\text{Purging Gas Flow Ratio (\%)} = \frac{\text{Flow Rate of Purging Gas}}{\text{Flow Rate of Supply Gas}} \times 100$$

The typical purging gas flow ratio for the sunsep™ is about 10-20% of the flow rate of the supply gas. In other words, the production ratio of dehumidified gas is 80-90% the rate of supply gas.

● **パージ回路内蔵モデル**：

SWB-10-150, SWB-17-200, SWCシリーズ(SWC-M04-70/OPを除く)は、パージ回路を内蔵しておりますので、ドライヤーの外側にパージ配管を設ける必要がなく簡便にご使用いただけます。(14ページのパージ空気流量表をご参照下さい。)パージガスはハウジングの下部若しくはパージガス出口より排出されます。パージガスはパージガス出口に配管接続することにより、別の場所へ排出することも可能です。

又、パージガス入口に別のガスを配管接続することにより、外部パージ方式としてもご使用いただけます。

ご検討の際には、お近くの販売店へご相談ください。

Model with Built-In Purging Circuits

The SWB-10-150, SWB-17-200, SWC series (excluding SWC-M04-70/OP) are equipped with built-in purging circuits, allowing ease of use without the purging line outside the unit. (Please refer to the table of Flow Rates of Purging Air on page14.) Purging gas exhaust is from the slit at the lower part of the housing or from the purging gas outlet. It is also possible to exhaust purging gas into a separate location by connecting a pipeline to the purging gas outlet. In addition, an external purging system can be used, connecting a pipe line of another gas to the purging gas inlet. Please consult your distributor if required.

DEHUMIDIFYING PERFORMANCE (MEASUREMENT EXAMPLE)

DEHUMIDIFYING PERFORMANCE (MEASUREMENT EXAMPLE)

アクアドライブ® AQUADRIVE™

SWT-SERIES

SWTシリーズは、フレミオン®チューブを樹脂製ネットで被覆したものです。本構造により、フレミオン®チューブを保護しながら、周囲環境と自由に湿度交換することができます。パージガスを必要とせず周囲環境湿度差を利用して300mℓ/min以下の微小流量サンプルガスの除湿や加湿を可能とします。

呼気ガス分析装置や新陳代謝測定装置などへ適用されます。

The SWT series surrounds a Flemion™ tube with plastic braided net. The braid net offers free humidity exchange with the ambient air, protecting the Flemion™ tube from damage. This enables the product to dry and humidify micro-flow sample gas of less than 300 mL/min, by utilizing the difference in ambient humidity without purging gas. To expiration gas analyzer and metabolism analyzer, etc.

- 小型・軽量
Small and Light
- パージガス不要
No Purge Gas
- 周囲湿度との調整
Adjusts to ambient humidity

用途 Applications

- 呼気ガス分析計
Expiration gas analyzer
- 代謝分析計
Metabolism analyzer
- 微小流量サンプルガスの除湿など
Drying or Humidifying for minute flux of a sample gas, etc.

SWT Series

DEHUMIDIFYING PERFORMANCE (MEASUREMENT EXAMPLE)

INSTRUCTIONS FOR USE

- 供給ガス中のドレンや異物などを取除くために、供給ガス入口配管に濾過度5μm以下のフィルターを設置して下さい。
To remove drainage, dust, etc., we recommend that a filter (filtering capacity of less than 5 μm) be installed at the inlet line of supply gas. Dehumidifying efficiency may decrease if drainage is mixed into the inlet line. We therefore recommend that an automatic drain system be installed at the supply gas inlet.
- 給油式圧縮機ラインに使用する場合には、供給ガス入口配管に濾過度0.3μm以下(95%捕集粒径)のオイルミスト分離器を設置し、オイルミスト濃度を1mgf/Nm³として下さい。
When a sunsep™ unit is used for the line from a lubricating type compressor, we recommend that an automatic oil mist separator be installed at the supply gas inlet line. The oil mist-separator must have an oil filterability capability of less than 0.3μm (95% collection capability of dust diameter) and should also have an oil-mist concentration of less than 1 mgf/Nm³.
- 供給ガスは清浄なものとし、ゴミ、腐食性ガス、有機溶剤、化学薬品などが混入しないようにして下さい。
Supply gas should be clean and free of dust, corrosive gas, organic solvent and chemicals.
- パージガス入口/出口に過度な圧力を加えないようにして下さい。(max.0.05MPa(Gauge))
Excessive pressure should not be applied to the purging gas inlet and outlet(max.7.1 psig).
- パージガスを10ℓ/min(ANR)以下の少量で使用する場合には、ニードル弁よりも固定オリフィスを使用されることをお勧めします。
For operation with a small amount of purging gas, not more than 0.35 scfm. We recommend that a small aperture be used instead of a needle valve.
- 減圧弁をご使用になる場合には除湿効率を高めるために、乾燥ガス出口側に設置することをお勧めします。
When installing a pressure reducing valve, we recommend that the valve be installed at the outlet line of dry gas, which will increase dehumidifying efficiency.

*1 低パージ仕様です。These products are low purge type.

NOTE

- 露点とは？
結露水が生じ始める温度のことで、ガスの乾燥度の尺度として、よく使用されます。露点が高いほど水蒸気含有量が少なく、乾燥度が高いことを意味します。
What does “Dew point” mean?
Dew point is defined as the temperature at which air including water vapor begins to dew. The term is often used as an indicator of the degree of dryness of wet gas. The lower the dew point is, the less water vapor is included, which means a higher degree of dryness.
- 露点を下げるには？
サンセップ®を使用して乾燥ガスの乾燥度を上げる(露点を下げる)ためには、以下の方法があります。
 - 供給ガス入口温度を下げる。(水蒸気負荷低減)
 - 供給ガス圧力を上げる。
 - 供給ガス流量(処理ガス流量)を下げる。
 - 生成乾燥ガス流量を下げる。
 - パージガス流量を上げる。**How is the dew point decreased?**
The methods to lower the dew point, or increase the dryness of dehumidified air with the use of the sunsep™ module, is as follows:
 - Lower the temperature of supply gas at the inlet. (Reduce the load of water vapor against the modules.)
 - Increase the pressure of supply gas.
 - Lower the flow rate of supply gas.
 - Decrease the product dry gas flow rate.
 - Increase the purging gas flow rate.

- 供給ガス流量が変動する場合のパージガス流量について
サンセップ®の特長として、膜素材に含水性があるので相当大きな負荷変動がある場合でも、その周期が比較的短い場合には除湿性能は平均化されます。
Decision on the Purging Gas Flow Rate with Fluctuating Dehumidified Gas Flow?
The sunsep™ membrane has a specific characteristic of retaining water in its material, absorbs even large load fluctuations, and averages its dehumidifying performance if the fluctuation cycle is comparatively short. The flow rate of purging gas can therefore be selected using an average load of product gas flow rate.

- クリーンな加湿用途について
サンセップ®に使用している膜素材は高い水蒸気(水分子)選択透過性をもっているため、他のガス成分の透過は殆どありません。中空糸膜の内側と外側に水分濃度差が生じると、その濃度差を均等にしようとする力が発生します。水分はこの発生した力をドライビングフォースとして、低い水分濃度の方へ膜を透過し移動します。このように、サンセップ®はクリーン加湿器としてもお使い頂けます。中空糸膜内外のガスや流体が異なる場合でも使用が可能です。
Use of Clean Humidification
The material used for the sunsep™ membrane has high selectivity and high permeability of water vapor (water molecules), so permeation of other gases is virtually non-existent.
When differences in moisture concentration between the inside and the outside of a hollow fiber membrane arise, sunsep™ will act to make the concentrations uniform, transferring moisture through the membrane in the direction of the lower moisture concentration. Thus the sunsep™ modules can be used for clean humidification if required.
The modules are also applicable if different kinds of gases or liquid are used on both sides of the membrane.

特別仕様・OEMも承りますので、ご相談下さい。
Please consult your distributor when special specifications and an OEM contract are required.

APPLICATIONS

計装用圧縮空気 Compressed Air for Measuring Devices	空気圧式測定器 自動弁 電／空変換器 ノズルフラッパ エアパージ	Measuring Devices Using Compressed Air Automatic Valve Electric / Pneumatic Converter Nozzle Flapper Air Purging
